Technical sheet

Telescopic staff 5m (with bubble and bag) Nivel System

Marque: NIVEL SYSTEM - EU

Ref Product: wire:TS-50

Ref Mcmining: NIVELTS-50

DESCRIPTION
Telescopic staff 5m (with bubble and bag) Nivel System
TS-50
Solid construction
Permanent graduation print
Bubble and soft bag included
Nivel System TS-50
Rugged telescopic staff to work with optical levels
In elevation measurements staves are part of the reading equipment, by which are determined the height or the height differences between points . The accuracy of the descriptions on them and solidness of construction have a huge impact on the final accuracy of measured elevation points.High quality (mechanical connections , lock handlers) determine the stability of the products and their lifetime . The offer includes a full range of levelling staves â€“ the precise invar staves for precision leveling, wooden staves , aluminum telescopic staves and special laser staves with milimeter scale.
Applications:
for different tasks â€“ invar staff for precision elevation measurements , wooden staves for accurate elevation measurements of control points , rack , aluminum and fiberglass staves with the â€žE " description on one side and millimeter scale on the other for quick elevation measurements at construction sites , special staves for work with laser levels , staff length from 2.4 m to 7 m
always vertical â€“ staves are adapted with boxed vial
convenience operation â€“ telescopic aluminum staves can be quickly composed / decomposed and easily fit in a car trunk
weatherproof â€“ both wooden and aluminium staves are resistant to water , moisture and high temperatures, under all circumstances ensure high precision measurements
protection against damage and dirt â€“ patches are sold mostly in protective covers
